Background

I will be creating a website using React js and TailwindCSS. My website will be for the University of Cincinnati's Army ROTC program and will contain information regarding a typical timeline and the branching opportunities. This website will have a more dynamic visual than the one we currently have. I hope this will look better visually and keep people reading about Army ROTC.

Technologies Used

React JS

tailwindcss

GitHub

Objectives

- Animated and interactive content to encourage engagement

- Provide content in a simple and clear way to promote education about the benefits or Army ROTC

Accomplishments

- Created a responsive Navigation Bar

- Animated and interactive content to encourage engagement

- Links to multiple pages

Challenges

- Lack of experience in web development

- I am doing a solo project so I have a very heavy workload

- Determining whether to focus on design or functionality first
